02 Treatment Plan

- 1 Treatment for Soft Rot: Remove and destroy all infected tissue immediately — do not compost.
- 2 Improve drainage.
- 3 Apply copper hydroxide (77%) bactericide.
- 4 Disinfect tools with 10% bleach..

03 Prevention Measures

-  Prevention for Soft Rot: Ensure excellent field drainage using raised beds.
-  Avoid injuries during cultivation.
-  Reduce plant density.
-  Water in morning — never evening..

04 Environmental Conditions

Environmental note: Dragon fruit grows optimally at 20–35°C with 60–80% humidity in full sun. Disease pressure increases during monsoon season.
